After scanning and saving the RCUs, the **Details** screen for each device looks similar to this:

Notice that the current **Protocol Version** is **AISG 1**. Click on the small asterisk to the right of the RET Detailed Setup box.
AISG Protocol switch for Central Control Unit

This screen will appear.

Use the pull down menu to select **3GPP** (same as AISG 2.0).
AISG Protocol switch for Central Control Unit

Select Set Mode.

The RET Status page appears.
AISG Protocol switch for Central Control Unit

Select the Details page of the target RCU to verify the switched protocol.

The AISG protocol can be changed back and forth as required, since both software programs reside in the RCU.
